Airport Construction Gets Underway

Passengers will first notice lane closures as part of \$340 million expansion

Construction at San Antonio International Airport is already kicking into high gear and the early work will take place where passengers and other airport visitors will be affected. One of the first steps being taken in this project is to remove and relocate many of the utility lines currently in use at the airport facility. What that means is road construction and various lane closures at various times.

- * **Upcoming work has southbound traffic on Airport Blvd. being diverted to W. Terminal Dr. Southbound Airport Blvd. is located southwest of Terminal Two and passengers typically use it to access Loop 410 & U.S. 281. The diversion will result in a decrease in the number of lanes available.**
- * **Construction along the “outer-curb pick-up area” in front of Terminal One will also affect traffic. Airport Police will strictly enforce the “loading and unloading only” policy in front of the terminals.**
- * **A temporary covered walkway will replace the existing walkway connecting Terminals One and Two.**
- * **Please view the map on Page 2 of this release for additional details.**

Artist Rendering of Terminal B

The roadwork is part of the major expansion plans currently underway at the airport. Plans which will bring two new terminals, a new parking garage and an extension of the two-tier roadway system currently in use in front of Terminal One.

3. Exiting vehicles traveling along the Airport Ring Rd. will be diverted just west of Terminal 2. That traffic will be funneled toward North Terminal Dr. where it will connect with W. Terminal Dr. This will mean fewer lanes for exiting traffic.

2. The covered walkway connecting Terminals 1 & 2 will be brought down. A temporary covered walkway will be constructed in the area. Ground transportation services will be relocated to the outer-curb in front of Terminal 1 and the Ground Transportation Mall west of Terminal 2.

4. Re-routed traffic on W. Terminal Dr. will merge back with Airport Blvd. near Challenger Plaza at S. Terminal Dr. Exiting the parking complex will also present a challenge. As much as possible, police officers will be on hand to assist with traffic flow.

1. Road construction will take place near the pick-up area of Terminal One. Barrels will be used to re-direct traffic at various times. Because of this, Airport Police will strictly enforce the "loading and unloading only" policy in front of the terminals. No extended stay will be allowed. We recommend dropping off passengers at one of the Airport's parking facilities, where the first 30 minutes of parking is free.
